

Moana Dive Pool

Quality and performance from the highest platform

Product choice is crucial when lighting indoor pool environments. Pool applications offer a unique combination of environmental and performance challenges. When it was time to upgrade the high-bay lighting in the Moana Dive Pool from Metal Halide to LED, Dunedin City Council chose Advanced Lighting Technologies NZ to supply the right luminaires for the job.

Challenges

The environment of an indoor swimming pool is aggressive. In such open air pool facilities corrosion of light fixtures can occur due to the combination of chemical/chlorine vapours, high humidity and high ambient temperatures. For Moana Dive Pool the selection of the luminaire was critical to ensure longevity for the application.

The second key consideration in re-lighting Moana Dive Pool was to provide appropriate levels of illuminance over the pool, around the walkways and on the diving platforms and boards without causing glare which would affect the everyday users of the facility.

Solutions

The Pracht Quadronius Pool is an LED high-bay designed to withstand the aggressive indoor swimming pool environment due to special components and coatings. It is designed for a temperature range from -40°C to 45°C and is Rated IP66.

To minimise glare issues, the Quadronius uses precision optics to provide a 65 degree beam of light to hit the targeted areas and limit source glare.

Key Benefits

- **Comfortable lighting for swimmers, life guards and spectators.**
- **Quality product that will withstand the aggressive environment**
- **Energy savings switching from Metal Halide to LED**

Advanced
LIGHTING TECHNOLOGIES

"The Pracht Quadronius Pool has been an excellent choice for the pool LED lighting. There were many factors to consider in a high use public area where safety is a priority. This high-quality fitting has exceeded our expectations in our pool environment. "

Brent Cunningham.
